DIGITAL MARKETING

STRATEGY REPORT FOR WORLD RALLY CHAMPIONSHIP

EXECUTIVE SUMMARY

Within this report, there are two digital marketing strategies for the World Rally Championship (WRC). The report explores the business and consumer experience within a highly contested digital environment. Part A uses the ENGAGE framework to create a social media strategy for WRC Gaming. It explains how the business will engage and retain a gaming audience using quality visual content, influential people and a gamified experience. Part B uses the SOSTAC framework to create a digital marketing strategy for Rally.tv. The strategy aims to increase direct subscriptions between 2026 and 2031.

Rally. TV should focus on building a strong brand so that it is competitive in a race where YouTube and DAZN are far ahead. Without a recognizable brand, Rally.tv will have its work cut out to hold down and attract new subscribers. WRC Gaming should look to create some incredibly engaging social media content with lots of interaction. This should be dynamic, visual content that will engage fans, and hopefully keep them glued to their screens and coming back time and again.

PART A: SOCIAL MEDIA STRATEGY FOR WRC RALLY GAMING

1.1 ENVIRONMENT ANALYSIS

Gaming social media has become one of the fastest-growing content categories worldwide, with short-form video content reigning supreme across platforms such as Instagram, YouTube, TikTok and Twitch. The plethora of gaming influencers and content creators continues to play an integral role in bringing gamers together and helping them interact with each other through their games and online content, as millions of followers log in to their favourite games and social media channels every single day to watch gaming clips, tricks, and live gameplay. The rise of the esports sector has also boosted interest in gaming and its online communities, which can be leveraged to great effect by brands.

Even though the social media profile of WRC Gaming is much weaker than those of its competitors, the official wrc.com website is showing only 5.89% of its traffic coming from social media sources. While gaming content on Instagram is largely a visual affair, Instagram traffic to wrc.com is practically non-existent, with a contribution to total traffic of near zero (**see Appendix 1**). Where our benchmark competitors in the genre (such as EA Sports and F1) are a good deal more prominent on social media and interact more often and in more engaging ways with their community of users through things like trailers, dev diaries and contests.

There is a lot of catching up to do when it comes to communication with the fans on social media, and that is both a challenge and an opportunity. It is evident that how a couple of platforms are basically unused, while Instagram and TikTok remain to be fully explored by the guys in Munich. The research will assess the competitive landscape, where players are most active and enable WRC Gaming to create a brand-relevant social media strategy to grow the brand into a major player in the world of motorsport and within the global esports' community.

1.2 NEEDS & AUDIENCE DEFINITION

While WRC Gaming obviously assume that WRC fans form the core target group for WRC Gaming, the target group for computer games is far broader than most people think. In fact, over the last 20 years, computer gaming has long since moved far beyond the relatively restricted target group that initially existed. From being the hobby of choice for the young, the workplace employed, and the students, this has developed into a common pastime for adults of all kinds of occupations, who have families and thus lead a normal life in addition to their love of gaming. A working man or woman, a father or mother, a manager or CEO can all be gamers at the same time. Scientific research clearly also confirms that the average gamer is a lot older than 18. In fact, a large proportion of today's gamers are between 25 and 45 years old, and so computer gaming really is a trans-generational phenomenon.

As already identified, WRC Gaming should focus on two target groups within the social media strategy: 1. Target group 1: Existing motorsport and WRC enthusiasts. These are mainly people

who are already involved and familiar with motorsport in general and WRC in particular. With appropriate content, they can also be won over for the WRC gaming franchise. 2. Target group 2: Casual gamers - new audience through social media. Although this target group is familiar with games in general, they have not been (yet) engaged with the rally simulation genre. In contrast to the existing motorsport community, there are virtually no prior expectations that could stand in the way of WRC Gaming's work. Thus, reaching casual gamers with the help of appropriate and appealing social media content represents a huge, untapped potential to recruit a new group of gamers.

WRC Gaming can use psychographic and demographic segmentation to create target audience personas per category. This ensures that the content will be relevant and meet the desired needs, preferences and behaviours of the target audience per category. To make sure social media efforts are relevant to each target audience per category, it is important to understand the most effective online channels to reach each group, what content they engage with and what motivates them to share or participate in the online activity.

1.3 GOALS & KPIs

It is generally thought that setting target goals on social media is a vital stage in planning the structure of a social media marketing campaign for any company, and WRC Gaming is no exception. Unless these targets are clearly defined, there is no means of verifying whether the social media campaign has achieved the required target. The social media goals for WRC Gaming should therefore be based on the principles of SMART. In essence, this means that these goals must be Specific, Measurable, Achievable, Relevant and as detailed as possible in terms of time. Within the parameters of social media, the main aims of WRC Gaming should be to generate quality brand awareness, in conjunction with increasing user engagement via social media platforms, and to gain as much User-Generated Content as possible.

WRC Gaming objectives. Within the first 12 months, WRC Gaming should aim to achieve at least 30% increase in the followers on Instagram, YouTube and TikTok. Engagement rate will be closely monitored monthly, with WRC Gaming's rate compared to that of other gaming brands. Finally, the UGC (user-generated content) of real drivers sharing their in-game experiences through videos of their gameplay and by taking part in the weekly challenges that are organised on a regular basis.

Monitoring the progress to these goals will require Key Performance Indicators (KPI) to be identified at the outset. The primary KPIs for this social media strategy will include, but are not limited to, reach and impressions, engagement rate, growth rate of followers, click-through rate and user-generated content (UGC). Through the review of their social media KPIs monthly, performance can be tracked, and the strategy can be evolved as needed to ensure a continuous evolution of the online presence for WRC Gaming.

1.4 ARCHITECTURE OF CONTENT

Having a content strategy that resonates and is consistent across all social media channels is a key goal for WRC Gaming. Using analysis and data of the user behaviour and the demographics of the

platforms, Instagram is going to be the focus for the content strategy due to the global reach and visual nature of the platform. However, a multi-platform approach to YouTube, TikTok and Twitch should be used to reach diverse groups across the platforms they prefer. Currently, Instagram accounts for almost zero of the 2, 267, 819 visits to wrc.com as of 2026 (**refer to Appendix 1**) and therefore action is required immediately.

The content needs to be cinematic, emotive, and visually amazing. The mix of content should include a combination of gameplay trailers, short-form cinematic reels, behind-the-scenes footage, driver stories, and user-generated content. This will be dispersed across all WRC Gaming social media channels. There will be a uniform audio identity, all in capacities as requested, with captions and a CTA to like, share and comment to encourage interaction and again engage and encourage the audience to get involved and share with their friends and family.

It is recommended that WRC Gaming introduce a content calendar to ensure they communicate in a relevant and methodical way. A content calendar is an updated calendar (spreadsheet or mind map) planning and highlighting the key content, format, posting times and platform adjustments for each week of each month. A consistent stream of content from a brand tends to yield significantly more engagement than inconsistent communications. By committing to the content calendar, WRC Gaming will generate excitement among its audience, as well as maintain regular interaction on the different social media channels.

1.5 GOVERNANCE & COMMUNITY

Having a successful WRC Gaming community is not just about posting content on a regular basis. The goal is to build a community where their audience feels comfortable and wants to join in, where they feel loved and are truly included in a 2-way conversation. Community Managers should deal with the feedback, keep a close eye on the conversation online and be a guiding presence to keep everything 'Facebook Friendly', 'Twitter Friendly' and 'FORUM Friendly.' Community guidelines should be clearly outlined and understood from the very beginning of any community. These are the foundation upon which all future conversations and discussions are built.

Healthy competition using gamified challenges, leaderboards and weekly skill contests can be a great way to keep their members engaged and returning to the platform repeatedly. Similarly, recognising and rewarding their most loyal members with user spotlights, premium content and other perks will only serve to deepen the bond between their members and WRC Gaming. And where better to recruit ambassadors for their brand than from the gaming influencer community, where a certain common interest is inherently clear, and the human warmth and authenticity are more tangible.

A well-governed and inclusive community will become WRC Gaming's most valuable marketing asset. Organic word of mouth, user-generated content and long-term brand loyalty will see through the initial hype and keep players engaged long after the excitement of the launch has faded.

1.6 EVALUATION & OPTIMISATION

Social Media Performance Review. There are numerous times in which WRC Gaming must check the performance of its social media strategy. Its success can change based on several metrics, and thus it must be checked often using a combination of quantitative and qualitative metrics. WRC Gaming must use social listening tools such as Hootsuite and Sprout Social that monitor the conversations, the sentiment and mentions of the brand name on the various social media platforms.

Key Performance Indicators (KPIs) should be reviewed monthly to ensure that the social media strategy is on track. In the initial social media strategy, the key KPIs were established as reach, engagement rate, follower count, and click-through rate. It is important to understand which of the social media posts are gaining engagement and therefore need to be adjusted or changed to ensure they are reaching and engaging with the target audience. If the KPIs are not meeting the expectations set out in the strategy, this may be an opportunity to trial alternative content types, wording and timing via the A/B testing.

A large part of the information WRC receive will be drawn directly from the community itself, gathered through the participation of players in online surveys and through many, often open, discussions. The data and feedback they collect will serve as an extra layer of qualitative analysis, which complements the information they gather with their tools and algorithms. In this way, their activities can evolve and are adapted to the needs and preferences of their community, forming an infinite loop that permanently watches, analyses and optimises the communication through social media channels.

2.1 SITUATION ANALYSIS

Rally.tv competes in a crowded niche in the broader digital streaming space, which is dominated by other, more well-known brands such as YouTube, DAZN and Amazon Prime Video. These companies and properties have a clear advantage when it comes to branding, user experience and the breadth of content that can be offered to the broadest possible audiences. In addition, and as shown in the following SimilarWeb (2026) data, which notes that as of February 2026, Rally.tv was viewed 363,774 times per month, a figure which was down 8.57% on January 2026 and had a bounce rate of 37.53% (as further outlined in **detail in Appendix 2**).

Problem statement Although there are many obstacles that Rally.tv needs to contend with, there is also a unique advantage that Rally.tv has as the only channel in the world that gives fans exclusive and dedicated WRC content. SWOT analysis based on the information Rally.TV gathered, Rally. TV still has low brand awareness and not enough variety of content to broadcast to its fans, which are its major weaknesses. However, the world is witnessing a surge in demand for niche sports streaming, which gives Rally.tv an opportunity to capitalise on it. The motorsports industry is quite large, and Rally.tv currently ranks 121st in the world, which is still a large margin for improvement (**see Appendix 3**).

Competitor analysis is a crucial step in forming a strategy. For Rally.tv, it is not about directly competing with YouTube or DAZN, but rather about ensuring Rally.tv is the one-stop destination for fans of rally driving, and that Rally.tv provides something different and better than any other platform.

A SWOT Analysis of Rally.tv reveals several key insights. (**refer to Appendix 5**)

2.2 OBJECTIVES

Between 2026 and 2031, Rally.tv's goals must be set based on an understanding of the spectator's expectations and Rally.tv's competitive advantage. Simply increasing content value alone is not sufficient. Rally. TV's future goals will have to be centered on quality, exclusivity and customization. All objectives should follow the SMART framework, ensuring they are Specific, Measurable, Achievable, Relevant, and Time-bound.

Reach a minimum of 40% year-over-year growth on direct channel subscriptions by 2028 - Optimize conversion rate on the platform - Lower churn rate through more tailored and high-quality content 4. Increase Rally.tv ranking in motorsports to reach a ranking of 50+ by 2031, and as a result, see an increase in web traffic and visibility of their brand.

User experience is a key priority for Rally.tv's development. UX improvements are crucial to the overall viewer experience. Currently, mobile accounts for 52.88% of all visits to Rally.tv, and we

believe it is crucial to improve the user experience in the mobile environment. Improvements to the mobile environment will be key to ensuring growth and retention levels are achieved for their paid subscribers.

2.3 STRATEGY

Rally.tv should grow the business equally in the Acquisition and Retention areas to ensure that the subscription growth rate, between 2026 and 2031, remains sustainable. A new subscriber base cannot be created solely to cannibalise the base of existing subscribers, resulting in unsustainable churn rates. A dual focus strategy that is equally weighted to Acquisition and Retention is essential to balancing the subscriber lifecycle.

Rally.tv Value Proposition. A key component of the strategic plan will be the Rally.TV value proposition. This should be strong and clearly articulated. The proposed value proposition is: Rally.tv is the world's leading online platform for rally that delivers exclusive live rally action and documentaries along with behind-the-scenes footage that cannot be seen elsewhere. Users will be able to tailor the viewing of content to their individual preferences, making Rally.tv a truly individualised viewing experience. Positioning Rally.tv in this way will ensure that the value proposition is distinct from the normal mass market OTT streaming player.

The strategy suggests that the initial target audience for the new platform will be three-fold: Existing and core WRC fan base; this is a motivated audience already engaged with the World Rally Championships and WRC generally. They just need to be steered in the right direction to the new media channel. General motorsport audience, perhaps fans of other competitions, including Formula 1. The younger section of this audience, identified as potential switchers from WRC, the game. This latter audience is currently a small group but arguably a huge, untapped opportunity for the Rally.TV platform.

2.4 TACTICS

Tactics should be aligned with the Rally.TV subscriber journey, which can be identified into 3 stages: Acquisition, Conversion and Retention. The tactics required to support each stage of the journey will be different to ensure that the subscriber journey is smooth and effective.

Get new subscribers: Invest in CTV ads to reach motorsport fans on Smart TVs; do paid social ads on Instagram, YouTube, and TikTok. Partner with motorsport and gaming influencers. The free trial, as well as bundling Rally.tv's product with other services (like a gaming subscription), is a wonderful way to lower the barrier to trying the service and get more first-time subscribers.

Converting users into paid members requires landing pages with an appropriate call to action, promotions, and a great member acquisition experience. To keep members long-term, personalisation via AI-driven content recommendations, smart behavioural segmentation, and content drops with special offers can all be impactful. Frequent platform updates and release of new features can also ensure a fresh and engaging user experience that minimises churn and maximises member lifetime value.

2.5 ACTION

The action plan for Rally.tv should follow a structured phased approach across the upcoming years. In the **first phase**, the priority should be reducing subscriber churn through improved user experience and early AI integration. The **second phase** should focus on executing a rich content strategy and diversifying revenue streams through sponsorships, bundling and merchandise. The **final phase** should concentrate on aggressive market capture, targeting new audiences globally and establishing Rally.tv as the leading dedicated rally streaming platform. Clear responsibilities should be assigned across marketing, technology and content teams with allocated budgets for each phase.

2.6 CONTROL

To effectively manage and monitor the digital marketing strategy on Rally.tv, a Performance Management framework is required that ensures an elevated level of accountability and reliability by combining numeric data and qualitative feedback consistently.

Data audits should be carried out regularly, and Key Performance Indicators (KPIs) should be reviewed monthly to monitor subscription growth, churn rates, conversion rates and engagement rates in relation to the objectives. Quarterly performance reviews should provide more in-depth information in relation to the success and evolution of the strategy, highlighting any trends and patterns that may not have emerged during the monthly monitoring process. In the event of underperformance, any necessary adjustments to the strategy or content should be carried out quickly to restore alignment with the objectives.

Social listening, use of social listening tools to monitor continuously the conversation about the brand and the word of mouth mentions of Rally.tv on all social media platforms. Subscribers' direct feedback through the form on the ratings of the Net Promoter Score (NPS) and in the community forums. The reviews by stakeholders within the organisation will be on a regular basis to make sure that everyone is on the same page in relation to the objectives of the strategy. Rally. TV's performance management approach will be dynamic, keeping up with the current state of the industry and with the anticipated consistent growth over the period 2026 to 2031.

CUSTOMER PERSONA FOR WRC GAMING

APPENDIX 3

MARCUS REYNOLDS

PROFILE

Gender : Male
Age : 32
Education : Bachelor's degree
Occupation : Software Engineer
Address : Birmingham, UK

"I love rally racing, but I wish WRC Gaming had a stronger online community to be part of!"

BIOGRAPHY

Marcus has been passionate about motorsport since childhood. He follows WRC races online and recently discovered WRC Gaming through social media. He games after work to unwind and loves competitive challenges online.

MOTIVATIONS

Reliving real rally experiences through gaming, competing online with friends, and being part of a gaming community.

GOALS

- Master rally simulation
- Grow his gaming channel
- Connect with other motorsport fans
- Self-improvement in gaming

FRUSTRATIONS

Lack of engaging WRC Gaming content on social media
No strong online community
Limited interactive challenges
Graphics and visual bugs

PERSONALITY

TECHNOLOGY

Digital Service	Percentage of Respondents
Instagram	85%
YouTube	70%
PlayStation	60%

SARAH MITCHELL

PROFILE

Gender : Female
Age : 38
Education : Master's degree
Occupation : Marketing Manager
Address : London, UK

“

"I just want one place where I can watch all my rally content without searching everywhere!"

BIOGRAPHY

Sarah is a busy professional who enjoys watching motorsport in her free time. She currently watches rally highlights on YouTube but finds it difficult to access full race coverage. She is open to subscribing to a dedicated platform if it offers real value.

MOTIVATIONS

Watching live rally conveniently, accessing exclusive behind-the-scenes, and having a personalised viewing experience.

GOALS

Find a reliable platform for full WRC coverage
Stay updated with race results and standings
Enjoy motorsport on mobile during commute
Easier action to live actions

FRUSTRATIONS

Rally content scattered across multiple platforms
Poor mobile experience on Rally.tv
Lack of awareness about what Rally.tv offers
Bad video quality

PERSONALITY

TECHNOLOGY

BRANDS

- DAZN
- YouTube
- Netflix
- Rally.tv

SWOT ANALYSIS FOR RALLY.TV

APPENDIX 5

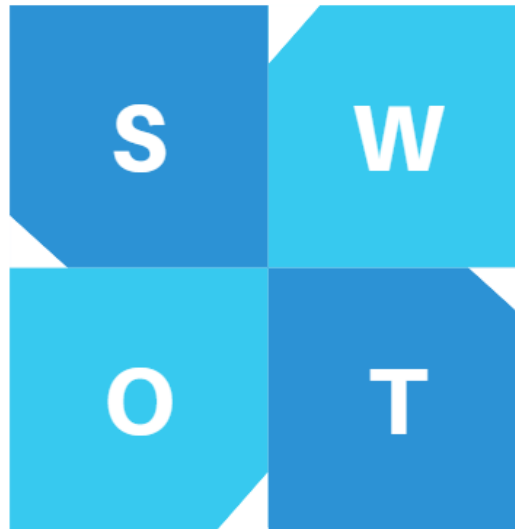

SWOT Analysis for Rally.tv

STRENGTHS

- Only platform for exclusive WRC content
- Direct-to-consumer streaming model
- Loyal niche fanbase
- Available on mobile and desktop
- Live race coverage and highlights

OPPORTUNITIES

- Growing demand for niche streaming
- Untapped Instagram and TikTok audiences
- AI personalisation and recommendations
- Bundling with gaming subscriptions
- Global expansion into new markets

WEAKNESSES

- Low brand awareness globally
- Only 363,774 monthly visits
- Social media contributes only 9.39%
- Instagram traffic at near zero
- Limited content variety

THREATS

- YouTube dominates with 27.02B visits
- DAZN and Amazon prime competition
- Free content alternatives available
- F1 TV growing as direct competitor
- Rapid changes in streaming technology
